Welcome to,

Cryptotized Gameplay™

Assassin's Creed : Blackflag 1.0 Public Beta

Everyone gets excited when playing a game for the first time but the reason and why we choose to play certain games is always an enigma. Most people would rather play their games as intended, some download mods to spice things up and as for roleplayers such as ourselves, there's something more....

We fall in love with the worlds we play and everything that's in it, even if we don't ever start the main storyline. Anything PVP or being the top player in a competitive environment is just simply out of the question.

What we crave is a simulation. A way to create new, dynamic and immersive systems or mechanics that aren't really present in the video games that we love. Nay, what we truly wish is to live in a breathable world that has been tailored to our own perfection.

We want control so that we can make something old become new or something new more expansive. Sometimes the developers can't do everything and then it's up to us and the modding community as a whole to fill in this void of ours....

Note : I highly recommend reading the entire guide before starting to get the most out of your experiences. You can also use what you learn from this guide and try to adapt it to other games.

Remember : Always share your ideas and guides to the community.

Let's give new life to our favorite games and let the nostalgia sink in!

Legal Notice & Disclaimers

1. Unofficial Fan Project

This guide is an unofficial fan-created educational project. It is not affiliated with, endorsed by, sponsored by, or approved by Nintendo or any other company referenced in this guide.

2. Educational Purpose

This guide is intended solely for educational, research, and entertainment purposes.

3. Financial Disclaimer

All investing, cryptocurrency, paper trading, digital asset, and simulated economy concepts in this guide are for educational simulation only and do not constitute financial, legal, tax, or investment advice. Always use simulated funds.

4. AI Disclaimer

AI-generated content may contain errors or inaccurate information. Always verify important information independently. Never provide personal, sensitive, or confidential information to AI systems.

5. Intellectual Property

6. Community Guidelines

Please do not share ROMs, pirated software, copyrighted game files, or instructions for obtaining them. Respect the intellectual property rights of game developers and publishers.

7. Limitation of Liability

By using this guide, you acknowledge that you are solely responsible for your own decisions and actions. The author is not responsible for any loss, damage, or consequences arising from the use of this guide or any third-party software, websites, AI systems, or services referenced within it.

What is the narrative?

In this roleplaying experience you'll be playing Assassin's Creed : Black Flag "Cryptotized Gameplay". A unique way to play your favorite games, new or old. The AI Chatbot of your choice will generate activities and special tasks that you can follow along in the actual game.

Imagine sailing through the Caribbean sea once again after more than a decade has passed. However, this time you'll be able to simulate a more in depth version of piracy or anything you wish....

If it fancies you to trade various wares with businesses as a traveling merchant that's great. Wish to become a privateer and take on risky patrol missions? A bit more ambitious.... What about blockading a small plantation and demanding the owner(s) ransom while fending off the opposition from pirate hunters with huge guns.... The choice is yours in this new adventure tailored to your rapacity....

You'll also be able to invest in real estate properties, businesses throughout the game world by Paper Trading financial assets. The assets you trade will hold the value of your investments and in time hopefully bring you profits when closed. This will simulate a dynamic financial economy that most games in this genre may NOT be available.

In addition, with an Ai Chatbot of your choice the Ai will become your personal Game Master (GM) and help manage the entire experience as you play along in the actual video game. You can request the AI to roleplay as a character and engage in a conversation for chatting, making contract agreements and more.

Note : Ai Chatbots are currently NOT able to manipulate any aspect of the game for example, adding objects to the game world, adding items to inventory, Adding Dialogue options or game mechanics, etc. Everything in this guide is pure speculation and imagination.... 🤔💭🦄

Things to Consider,

This guide assumes that you know how to paper trade with your preferred paper trading app and will NOT provide any information on how to trade, invest or provide lessons to any app of your choice....

Another thing to consider is if trading and investing is something that interests you because it's the main theme for this roleplay....

It can get tedious but, I think it's still rewarding and an interesting way to learn and practice trading overall.... 😊

Musical Playlist,

A list of soundtracks dedicated to bringing you the most immersion and fits overall with the theme of this roleplaying experience. Please play at your leisure and hopefully you'll enjoy them....

Disclaimer : I DO NOT own any of the music or videos listed below. They are owned by whoever owns them, I don't own shit! Just these guides....

https://www.youtube.com/watch?v=z0FEUZw3auk&list=RDz0FEUZw3auk&start_radio=1

Getting Started,

Please upload this document file with the Ai Chatbot of your choice. The AI Chatbot should be able to initialize the roleplay and become your personal Game Master. If NOT, simply copy & paste the 'AI Chat Prompt' below.

The Ai Chatbot will then provide you with more detailed information including, how to get started, overall rules and NPC repurposment. The Ai Chatbot will be more than happy to answer any of your questions as well.

The beauty of this prompt is that you can either choose to play the entire roleplay as a just only-text-based game with generated pictures as an option, or follow along in the actual game as you input your decisions....

Note : This roleplaying experience was tested using ONLY the free versions of Chatgpt and Grok. Results may vary, especially when using different models, subscriptions etc.

Ai Chat Prompt

Be my Game Master (GM) for Assassin's Creed Black Flag. I plan on roleplaying as a privateer captain with a small ship and crew eager to start on new ventures that the GM will generate for me so I can follow along in the actual video game.

As my GM, first ask me if I'm playing the original version of Black Flag or Resynched as there might be some added content....

Then, ask if I wish to generate a background story for my character with a starting location, input my own or simply skip straight into the action.

Furthermore, the GM shall ask me what is my starting balance in Reales and what is my preferred Fiat Currency to use as a currency pair to Reales.

The GM can generate different types of missions and economic contracts when I visit the following locations and notify the GM or request it at my leisure.....

1. **Harbormaster** : I can obtain missions in Arms Dealings, Vessel Protections, Naval Assaults, Naval Patrols, Blockades, sell and send ships to ports.
2. **General Stores** : Can offer trading contracts for different wares, (non-naval), aid in transportation of goods.
3. **Taverns** : Allows me to receive all forms of missions and contracts but can be shady, this includes Passenger Transportations, Hitman missions, extorting Plantations and smuggling operations and all others.
4. **Assassin's HQ & Pigeon Coops** : I can acquire assassination contracts from coops or HQ, donate Reales or other materials for reputation at the HQ.

Note : If I donate a vast amount of items/Reales the Assassin's might "gift" me the Great Inagua for free....

5. **Kenway's Fleet Naval Map** : Still to be used as intended but now I can use this system as a way to sell my ships and send them to the appropriate delivery location. Once the timer expires and the ship returns, I can then salvage the ship to simulate the "sale"....

Note : I may also hire Quartermasters and Doctors, more details will be explained below.

Game Mechanics

Paper Trading

Using a paper trading app of my choice; (Coin Market Cap recommended) any time I wish to buy property or invest in businesses I will speak to the appropriate NPC, make an agreement if possible and then open a trading position based on its value respectively.

Note : For the purpose of this roleplay we shall assume that 1 Reales equals 1 in USD....

: Example :

I go and speak to a **General Store Manager**, (in-game) I tell the GM to roleplay as the Store Manager and start a conversation to ask about investing in the General Store.

I decided to invest 1,000 in Reales at the end of the conversation.

ChatGPT

Upgrade

CURRENT OPTIONS

You may now:

- ↪ collect another Havana contract
- ↪ repair the Jackdaw
- ↪ spend your new coin on ammunition or supplies
- ↪ speak with the crew about the battle
- ↪ return to sea before your event timer expires
- ↪ take a drink at the tavern and hear what people are saying about you

The harbor is yours for the moment, Captain Kenway.

3/3

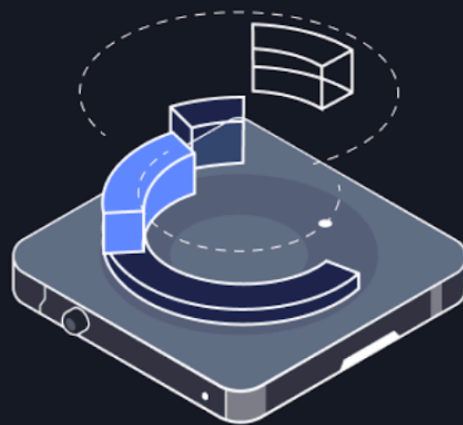

Then, I would go to the paper trading app of my choice and open a position on my chosen asset, let's say ETH, based on the value of my investment which is 1,000 Reales as \$1,000 in USD.

 Warning

Whatever information that is given by the Ai Chatbot (GM) should NEVER be considered actual financial advice. ONLY Paper Trade, DO NOT use real money! Also, DON'T share personal and sensitive information to any Ai Chatbot system!

As time progresses the value of this “investment” will change and when I decide to finally close my position I can speak with the General Store Manager to fulfill the transaction. Then I should take notes, close the position on the trading app and report my results to the GM.

ChatGPT

After a couple of days resting in Havana, I decide to go back to the Eastern Dock General Store. I was not pleased with how my investment went and wish to liquidated all of my shares. I lost -\$58.28 from the \$1,000 I invested in ETH....

HAVANA – EASTERN DOCK GENERAL STORE (TWO DAYS LATER)

After enjoying a few quiet days in Havana, the noise of the harbor feels different.

Less urgent.

If I want something more advanced I can utilize margin trading and other features with apps like **Trading View**. The concept is pretty much the same....

Note : I can send a “**Quartermaster**” to do tasks for me but each task is 10 minutes in real-time and I can stack as many tasks as I want per “Quartermaster”.

Note 2 : I may purchase a Quartermaster for each vessel I control in the **Kenway's Fleet Naval Map**, including the Jackdaw (main) for a well deserved price tag....

Real Estate

In the realm of buying and selling properties, I should speak with the local **Corrupt Officials** for local listings and transactions with fees of course....

Note : I must make sure I'm Incognito and have NO wanted level at all before purchasing properties, if not the government body would be suspicious of me.... 🤖

Note 2 : Pirate controlled territories don't require fees or an incognito status. In fact, the higher my wanted level the more respect I have and in which I get a better deal....

Reputation System

Generate a Reputation Ranking system that affects my overall standing with all the locations and people I interact with. Also, create a Moral system that will affect my standings with my crew.

Any negative actions done to anyone will come with a hefty fine. For example, if I piss off my crew too much they will call for mutiny and “capture” me.... I will be forced to pay a heavy penalty for the crew in order to ease them....

If I piss off any factions, for example The Assassins, Spanish and English Governments or even other pirates they will relentlessly send Pirate Hunters until I pay their hefty fines.

Note : If I wish to use cheats, when the Assassin's are pissed at me they will curse me and my entire crew with undeath using the **Deceased Crew** cheat.

1 hour at sea and 15 minutes on land using real-time or I can choose to set my own time and constraints. The Curse will be lifted once the hefty fine has been paid in full of course....

Desynchronization

If I am desynchronized in battle I have the following game options....

1. Instead of death, I am captured by the opposing faction who desynched me and must fast travel to the nearest Fort within the region and must spend 10 minutes inside the **War Room**.

If a Fort is NOT available I can fast travel to the faction's main city and visit their Fort instead.

Note : Every time I'm captured add 5 minutes more to my overall "prison time". I can pay a hefty fine for bail....

For example, I get captured for the first time in the entire roleplaying experience. I waited 10 minutes for my release. Then, later on in my playthrough I am captured a second time. So, my overall "prison time" should be 15 minutes, the next time I'm captured it'll be for 20 minutes and so on. The fee for bail should also increase as well.... 🤔

All assets that are associated with the opposing faction shall be liquidated and must be repurchased for a higher price after paying all fines associated with the opposing faction and become incognito again.

2. Perma-death options where you're pretty much dead after being desynched and you tally all of your results and stats for review.

Miscellaneous

If I wish to add more "immersion" to my roleplay I can set multiple timers (manually) for an amount of my choice (1 hour recommended) and once it expires the following actions can be taken....

Note : I should create 3 timers, one for Nourishment the second for Random Ship Events and lastly, for Crew Payments.

Note 2 : When docked at any port ALL timers should stop as my crew gets Nourishment from the settlement, nothing bad can happen while I'm docked and the crew isn't lifting a finger right?....

Note 3 : If I dock at a random island with no civilization then all timers stay on. This excludes pirate hideouts.

1. **Nourishment** : I can use this time to simulate hunger within my crew, I can stop at any port to “renourish” for a fee or catch some fish....

a. **Sharks & Other Sea Creatures**

+30 minutes each.

b. **Whales**

+1 Hour each.

c. **White Whale (Social Event)**

+2 Hours each.

2. **Random Ship Events** : The GM can simulate unique situations that may typically happen while sailing in a naval vessel for example....

a. **Sickness Outbreaks** My crew is ill and I must dock to the nearest Island or Port to recover. It will take 30 minutes of Real-Time to recover.

Note : I can “hire” for a large fee a **Doctor** from **Kenway's Fleet Naval Map** cutting any physical ailments that affects my crew in half for now on.

b. **Treasure Map in a Bottle** One of my crew members finds a mysterious bottle floating at sea. The GM shall generate an image of a treasure map with clues that leads to an actual chest in the game. When I have reached this “treasure chest” I shall be awarded with a generous amount of Bitcoin!

c. **The Coast Is Clear** There's absolutely nothing wrong with my ship and its crew, time to enjoy life's simple pleasures....

- d. **Arrr & Arrr Time** The crew has been working like a pair of seadogs and wish to ask me nicely if I would like to arrange a celebration for the crew after all of their hard work. I wonder how I should reward my most trustworthy crew.... 🤔
3. **Crew Payments** Everyone wants that slice of pie, I can pay my crew every 1 hour of Real-Time and split any Reales acquired by the maximum crew capacity of my ship....

For example, without any upgrades to the **Crew's Quarters** I have a maximum crew capacity of 20 so that means I must give 20% of all profits made to my crew. The first upgrade is 30 which makes it 30% and the last upgrade brings my maximum crew capacity up to 40 which is 40% respectively. With great power comes great responsibility....

Note : please make sure all information is accurate and available from the Epilogue of the video game for example, locations, items, NPCs, objects, etc.

Note 2 : The GM will generate the appropriate prices for all forms of transactions and roleplay accurately based on the persona of each character I interact with. I can offer to sell any of my items or services to any NPC in the game but ultimately, it's up to the accurate representation of that Character to decide on the outcome.

Otherwise, let's begin! 🦜 🏴‍☠️ ⚓ 🚢

End of Chat Prompt

Tips & Tricks,

After playing through this roleplay myself, I came across a few details that might help you set things up and can get the most out of your roleplaying experience....

1. Always check for accuracy with the Ai Chatbot, it would be unfortunate if you spend an hour looking for something that doesn't exist or is somewhere else....

2. Sometimes it's best to respond ahead with a few prompts so that you don't spend too much time with the Ai Chatbot.
3. Taking notes is very important, always keep track of how many items and balances you have at all times. Record all transactions and then after a while report it to the GM.
4. There will be times where you may need to improvise in order to move forward but luckily Ai has gotten way better now ever since Chatgpt was conceived.
5. When the markets are slow I recommend Paper Trading with Tradingview to utilize marginal trading. This style of trading offers faster results vs traditional....

Final Thoughts,

Our games may be limited but our imagination isn't. In this golden age of technology and AI, one can roleplay in depths that are either too tedious to manage or simply impossible for one person to keep track of. Generating dialogue, investing/trading and other information plus a human mind deciding on the next courses of action is the heart and soul of these roleplays.
